Application as Senior Cloud Infrastructure DevOps Engineer

Dear Recruiting Team,

Modern software delivery requires more than code execution—it demands reliable CI/CD pipelines, automated testing infrastructure, and containerized cloud platforms that accelerate release velocity without compromising system stability. With over 9 years of hands-on experience bridging software engineering, release verification, and cloud infrastructure, I focus on streamlining deployment operations and platform robustness.

Equipped with deep expertise in Linux environments, Docker containerization, AWS/Azure cloud ecosystems, and CI/CD automation, I bring the practical skills needed to optimize delivery pipelines at **Lokaler_Testlauf**.

Key alignment with your platform & infrastructure goals:

- **Proven Release Cycle Reduction:** Developed automated Python/Bash test suites in GitLab CI/CD at Mindbreeze, reducing verification turnarounds by 70% (from 10 to 3 days).
- **Containerization & Telemetry:** Managed containerized microservice workloads (Docker, Linux) and integrated telemetry profiling routines to enforce operational quality and performance visibility.
- **Developer Experience (DevEx):** Leveraging a strong C++/Python background to understand developer workflows, remove build bottlenecks, and bridge Dev and Ops teams effectively.

I am particularly drawn to **Your company** because of *modern cloud infrastructure*. I would be delighted to bring my pragmatic approach to problem-solving to your engineering team and contribute to the continuous improvement of complex systems.

I would welcome the opportunity to discuss your technical challenges and projects in more detail in a personal interview.

Sincerely,

Markus Gruber, M.Sc.
