Application for AI Automation Engineer (f/m/x)

Dear Ms. Schwarzl-Moser,

Modern software delivery relies on more than just code execution—it demands reliable CI/CD pipelines, automated testing infrastructure, and containerized cloud platforms that accelerate release cycles without sacrificing system stability. Having spent over 9 years at the intersection of software development, release verification, and cloud infrastructure, I build platforms that bridge development teams and operations smoothly.

With a strong foundation in Linux systems, Docker containerization, cloud environments (AWS/Azure), and CI/CD automation, I bring a proven capability to streamline release infrastructure for **MP Corporate Finance**.

Why my background aligns with your platform engineering needs:

- **Proven Release Cycle Reduction:** At Mindbreeze, I engineered automated Python/Bash test frameworks integrated into GitLab CI/CD and Azure DevOps, cutting release verification duration by 70% (from 10 working days to 3 working days).
- **Containerized Infrastructure & Telemetry:** I build and manage containerized microservice environments (Docker, Linux) while deploying telemetry routines to maintain uptime and performance visibility.
- **Developer Experience (DevEx):** Having an extensive C++/Python backend engineering background allows me to understand developer workflows deeply, eliminating delivery friction and build bottlenecks.

MP Corporate Finance particularly impresses me with *MP Corporate Finance is one of Europe's leading mid-market MA boutiques, where AI-powered automation tools are deployed on live cross-border transactions from day one.*. I look forward to contributing my automation experience to scale your deployment infrastructure.

I welcome the opportunity to discuss your platform and DevOps vision in a personal interview.

Sincerely,

Markus Gruber, M.Sc.
