# Application for AI  Automation Engineer (f/m/x)

Dear Ms. Schwarzl-Moser,

Bridging advanced mathematical modeling with high-throughput, production-grade AI infrastructure requires more than basic model training. It demands deep numerical understanding, hardware-accelerated execution, and scalable data architectures capable of handling complex enterprise data flows. Combining an M.Sc. in Scientific Computing with over 9 years of software and ML engineering experience, I specialize in transitioning AI concepts into high-performance production systems.

From embedded GPU hardware acceleration (CUDA/ONNX) to cloud-native RAG processing backends (Vector DBs, PyTorch, AWS/Azure), I bring the technical depth required to power data-driven intelligence for **MP Corporate Finance**.

**Why my expertise fits your AI & Data Engineering role:**

- **Mathematical & Scientific Foundation:** Master's degree from the University of Vienna in Scientific Computing, providing advanced expertise in numerical algorithms, numerical linear algebra, and data optimization.
- **Production AI & RAG Architectures:** Practical experience designing cloud-deployed Retrieval-Augmented Generation (RAG) backends, vector database integrations, and automated PyTorch deep learning pipelines.
- **Hardware Acceleration & Data Systems:** Proven track record optimizing deep learning models via CUDA for real-time edge processing alongside distributed data pipelines (PySpark, DuckDB).

**MP Corporate Finance** stands out to me due to *MP Corporate Finance is one of Europe's leading mid-market MA boutiques, where AI-powered automation tools are deployed on live cross-border transactions from day one.*. I am eager to bring my background in ML engineering and GPU acceleration to your team.

I look forward to discussing how my experience aligns with your team's goals in an interview.

Sincerely,

**Markus Gruber, M.Sc.**
